

# eProphet Cloud Services

**Extend the functionality of your eProphet systems to the cloud; empowering your IT solution further by providing better connectivity with employees, emergency data recovery and enterprise wide reporting to guide your business decisions, help maintain profitability focus and assist with future strategic planning.**

## Welcome to the Cloud

Abcom Cloud Services is a cloud based framework through which you can utilise a range of powerful apps that extend the functionality of your eProphet Store and eProphet Admin sites. Cloud services do not require you to install any software; simply access them anywhere and anytime from any internet device.

## Configurability, Accessibility, Scalability

All Abcom Cloud Service apps are configurable by you to operate how you want and deliver information how you want. You can access them anywhere and anytime, so even when you are away from your business you can still keep your finger on the pulse. Additionally, as your business grows, cloud based computing easily allows the processing power and storage requirements of your apps to scale as needed on demand; there's no expensive capital outlay on IT infrastructure at the start and no bottlenecks in expansion.

## User Access

User access for your business can be configured how you need it. Different levels of access can be set for the franchisor, franchisees, head office, managers and individual employees. Users are then able to log on an update their details easily and quickly.

## Localisation

eProphet CFM is available in multiple languages and can be set up to maintain inventories in multiple currencies, languages and tax configurations as per the needs of each store operation.

## Flexible Currency and Language

Abcom Cloud Services support international franchises - apps can be configured to process, share and display data from one end of the QSR operation to the other regardless of each user operating language, currency and time zone.

## Electronic Data Collection

The Electronic Data Collection (EDC) cloud app automatically transmits sales, labour and inventory data from each of your eProphet systems to a central, private and secure database from which enterprise level EIS reports, KPI's and alerts are generated and accessible from any internet enabled device. With the EDC cloud app you can easily and quickly compare all your consolidated QSR store sales data, metrics and performance indicators to facilitate big picture business decision making.

## eTeam

The Online Scheduling cloud app enables two way, web based interaction with employees and work schedules. Weekly schedules are uploaded from the eProphet Store Scheduling system to a private Abcom Cloud Services website with relevant employees being notified via email of their published or changed shifts. Additionally, employees can log onto the Abcom Cloud Services website, view their payslips, view and update their details and preferred availabilities with automatic download back to the store for the scheduling manager to review.

## Offsite Data Backups

What happens to your business data if disaster strikes your business? Having mission critical business data routinely and securely backed up to cloud based storage via the Offsite Data Backup cloud services app offers a key part of your business emergency data recovery plan.

## Security & Confidentiality

Abcom systems are built with strong security for your peace of mind. All interaction with the system is restricted and logged by user account, configured however you so require. Additionally, all databases, data backups and data transmissions are 128bit encrypted to prevent unauthorised access from the outside.
